

Use our knowledge

Our knowledge in water and sanitation has developed over almost 40 years, contributing evidence-based answers to important questions about what to do and how to do it. We invite you to use this knowledge.

Books; manuals; case study reports; academic papers; fact sheets; technical notes and illustrations; briefing reports and conference papers – all are produced using both conventional and new media. Many are available to freely download, and you can buy printed editions.

We also house one of the world's largest collections of specialist resources dedicated to water and sanitation. Search the database online and discover live links to pdf files*. Here's just a taste of the hundreds of items available:

- **Guidance Manual on Water Supply and Sanitation Programmes** for the Department for International Development (DFID)
- **Infrastructure for All** for meeting the needs of both men and women in development projects
- **Spreading the Word** resulting from a pioneering project to promote dissemination
- **Technical Notes for Emergencies** for the World Health Organization (WHO)
